

JETHER MAE TOLENTINO-LATAG

Digital Engineering Team Lead | BIM & Digital Twin | Data Systems | Project Deployment
+63 917 795 2026 | tolentinojethermae@gmail.com | Pasay City, Philippines | [Website](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY

Digital Engineering Team Lead and Deployment Specialist with 10+ years of experience bridging engineering and software delivery across large-scale infrastructure projects. At Willow, leads deployment of **Digital Twin** platforms for major U.S. enterprise clients (Walmart, UTSW, DFW Airport, and others) managing cross-functional teams and onboarding thousands of digital assets across projects of all scales.

Combines deep **BIM** and Architecture, Engineering & Construction (**AEC**) domain expertise with hands-on technical capability in **Python, SQL, Power BI, and Azure DevOps**. Skilled in building **automation tools**, integrating data systems, and translating complex engineering data into actionable insights — including **AI-assisted workflows** leveraging **Claude** (Anthropic) and OpenAI **Codex** to accelerate reporting, data synthesis, and operational decision-making. Registered Mechanical Engineer (PRC) with certifications in **ISO 19650** and **Lean Six Sigma Yellow Belt**. **Licensed Mechanical Engineer** and recently completed **Graduate Diploma in Computer Science** at the University of the Philippines – Open University.

SKILLS

- **Digital Twin & BIM:** Digital Twin Deployment, BIM Coordination, Revit, Navisworks, AutoCAD, Clash Detection, Asset Data Onboarding, SP3D, SPR
- **Project Management:** Agile Delivery, Azure DevOps, Sprint Planning, Resource Planning, Cross-functional Team Leadership, Stakeholder Management, Confluence
- **Data & Automation:** ETL Pipelines, Data Validation, Real-Time Dashboards, Automated Reporting, Power BI, Power Automate
- **Cloud & Infrastructure:** AWS EC2, Cloud Deployment, Full Stack Web Development, System Integration, GitHub
- **Construction Platforms:** Aconex, Procore, Document Control, EPC Workflows, ISO 19650 Information Management
- **Tech Stack:** Python, SQL, PHP, JavaScript, HTML, CSS, Power BI, Power Automate, SharePoint, VS Code
- **AI & Automation Tools:** Claude (Anthropic), OpenAI Codex, GitHub Copilot, AI-Assisted Workflow Automation, Prompt Engineering

EDUCATION

Graduate Diploma in Computer Science | University of the Philippines Open University | **2024-2026**
B.Sc. Mechanical Engineering | Technological University of the Philippines - Manila | **2009 – 2014**

WORK EXPERIENCE

Deployment and Activations Team Lead – Willow | 2025 – Present

- Lead digital twin platform deployments across a portfolio of major U.S. enterprise clients including Walmart, UTSW, DFW Airport, UCF, and Columbus State University — spanning single buildings to multi-site enterprise portfolios
- Manage a cross-functional team of 6 individuals, overseeing end-to-end delivery from data onboarding and validation through to platform go-live
- Onboarded thousands of assets across concurrent projects, coordinating data ingestion, spatial mapping, and Building Management System (BMS) integration into Willow's digital twin platform
- Built an automation pipeline of asset room-location mapping from raw data extractions, eliminating days of manual spatial lookup per project

- Integrated SharePoint standup form data with Azure DevOps via automated pipeline, eliminating manual project reporting entirely and providing real-time delivery visibility
- Engineered an interactive End-of-Week reporting dashboard (HTML/CSS/JavaScript) aggregating live Azure DevOps and SharePoint standup data across 7+ concurrent enterprise client deployments, with automated project-level blocker narratives and Teams-formatted export — eliminating ~3 hours of manual weekly reporting preparation
- Deployed AI-assisted reporting workflows using Claude (Anthropic) to automate standup resolution tracking, ADO data synthesis, and stakeholder-ready narrative generation — enabling real-time project health visibility across a multi-client portfolio
- Drive continuous improvement across deployment workflows, standardizing processes that reduced rework and improved data accuracy across the team

Senior Deployment and Activation Coordinator – Willow | 2024 – 2025

- Led a team of 2 – 6 individuals across concurrent enterprise deployments, overseeing end-to-end delivery from data onboarding through platform go-live
- Managed weekly Agile sprint cycles across multiple concurrent projects in Azure DevOps, coordinating resource allocation and delivery tracking enabling stakeholders to monitor real-time project progress.
- Onboarded thousands of assets per building across multi-discipline facilities (MEPH, AV/IT, BMS, Security), translating raw engineering data from Revit models and contractor documents into platform-ready asset records
- Conducted multi-layer QA/QC using automation scripts and STP Validation tooling to identify missing attributes and broken asset relationships — improving data accuracy and reducing post-go-live remediation across all active deployments

Senior Digital Coordinator – Willow | 2022 – 2024

- Co-developed Python-based ETL pipelines to extract, transform, and load engineering datasets from Revit models and contractor documents into structured loadsheets, automating data ingestion into Willow's digital twin platform
- Conducted data validation, QA/QC audits, and gap analysis ensuring data integrity across integrated BMS and asset management systems
- Integrated multiple data sources into centralized Power BI dashboards, supporting executive reporting and operational decision-making
- Collaborated with software development teams to surface platform issues, define data requirements, and improve digital workflows

Digital Coordinator – Willow | 2021 – 2022

- Performed BIM model federation and coordination using Navisworks, AutoCAD, and Revit across multidisciplinary infrastructure projects
- Conducted model audits and ensured compliance with BIM Execution Plans and ISO 19650 information management standards
- Generated clash detection and coordination reports, improving design resolution across multidisciplinary engineering teams

Mechanical Data Specialist / Data Validation / Data Steward – Fluor Corporation | 2019 – 2021

- Managed engineering data and document control workflows via Oracle Aconex across large-scale Engineering, Procurement & Construction (EPC) projects
- Resolved client data validation issues and ensured vendor compliance with project information management standards
- Coordinated cross-discipline data submissions and maintained structured asset records within project information systems
- Owned SAP materials management for equipment BOM data across the full design-to-procurement lifecycle, supporting Mechanical data and procurement coordination.

Associate Mechanical Design Engineer – Fluor Corporation | 2018 – 2019

- Developed and maintained mechanical equipment models using SP3D and SPR across engineering design phases
- Coordinated with multidisciplinary teams to identify and resolve design conflicts, supporting on-schedule delivery of engineering packages
- Trained junior team members on design tools, workflows, and compliance standards

Mechanical Engineer – Arcadis | 2017 – 2018

- Designed HVAC systems, performed engineering calculations, and coordinated layouts with cross-discipline stakeholders

Mechanical Drafter – Fluor Corporation | 2015 – 2016

- Maintained mechanical equipment models and drawings, supporting design and drafting activities across project disciplines

KEY CLIENT ENGAGEMENTS

Willow (2021 – Present)

Walmart (*Retail*), DFW Airport (*Aviation*), UTSW (*Healthcare*), NAU (*Higher Education*), CSU (*Higher Education*), UCF (*Higher Education*), Microsoft (*Technology*), Brookfield (*Real Estate*)

Arcadis (2017 – 2019)

EMAAR – Dubai Hills Mall (*Real Estate*)

Fluor Corporation (2015 – 2016, 2019 – 2021)

SASOL Ziegler (*Petrochemical*), LyondellBasell (*Chemical*), Shell LNGC (*Oil & Gas*)

PERSONAL PROJECTS

Carbon Footprint Tracker – Full Stack Web App (AWS-Deployed)

- Designed and deployed a full stack web application for tracking carbon emissions using PHP, MySQL, HTML, CSS, and JavaScript
- Hosted backend on AWS EC2; integrated GitHub Pages frontend with cloud API.
- Implemented user authentication, session management, and database-driven emission factor calculations

Personal Web Profile – Frontend Development

- Built a responsive personal web profile using HTML, CSS, and JavaScript

CERTIFICATIONS & TRAINING

- **Registered Mechanical Engineer** – Philippine Regulatory Commission (PRC) License #0087369
- **Certified Lean Six Sigma Yellow Belt** – MFOpex
- **Information Management Practitioner** – ISO 19650
- **Trainings:** Agile Project Management, Power BI, Python and SQL, Revit, ISO 19650
- **Global Leadership Center (GLC 1)**

LANGUAGES

- English – Professional Full Proficiency (IELTS 7.0)
- Filipino – Native
